Art Unit 2133 6-28-04

DETAILED ACTION

1. Claims 1 to 16 are presented for examination. The preliminary amendment filed 12-04-2001 amended claims 14 to 16.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119, which papers have been placed of record in the file.

Allowable Subject Matter

3. Claims 1 to 16 are allowed.
4. The following is an examiner's statement of reasons for allowance: the prior art made of record teaches CRC code generation for parallel data. For instance, Kodama et al. (USP 5870413) discloses an adder [8] encoding data bits by adding the remainder data with a received parallel data of a CRC code word and Keller (USP 6701479 B2), teaches a fast cyclic redundancy check generation system wherein a CRC generating circuit employs multiple polynomial divisions (PD) in parallel and a selector selecting a variable length data from the parallel path of the (PD's). The prior art made of record teachings is non-obvious over the instant invention; because the prior art made of record fails to teach or fairly suggests or render obvious the novel element of a CRC

encoding circuit including multiple encoding units, a selecting unit and a converting unit as recited in the claims.

Specifically, the prior art made of record, taken alone or in combination fails to teach or fairly suggests or render obvious "a CRC encoding circuit for generating a CRC code in accordance with a parallel data having a remainder portion data in a last data set of the parallel data, comprising: a converting unit for converting the remainder portion data into a serial data; and a second encoding unit for generating a third CRC code selected by the CRC code selecting unit and the serial data converted by the converting unit."

Claims 1, 5, 9 and 13:

The claims are allowed because they are patentably distinct over the prior art made of record for the specific elements claimed as stated above. Dependent claims 2 to 4, 6 to 8, 10 to 12 and 14 to 16 are also allowed over the prior art made of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Fahmi et al. (USP 6128766), discloses a high speed CRC algorithm wherein a CRC circuit includes an input data CRC calculator [3] and an input data and reserved field CRC calculator [5] processing input data in parallel and a multiplexor [7] selecting data outputted from the CRC calculators [3 & 5],

Freeman et al. (USP 3678469), discloses a universal cyclic division circuit employing a old CRC register and a new CRC register for the generation of CRC codes.
